

SIGNAL® MIRRORS

Innovative Signal® Mirrors use LED's to turn ordinary mirrors into safety features that command attention! When a turn signal is activated, a flashing chevron appears from behind the glass in the corresponding mirror to alert drivers in your "blind spot" of your intentions. When emergency flashers are used, both mirrors flash warning signals.

The mirrors function as conventional mirrors whether the turn signals are activated or not.

Target Zones for Signal® Mirrors

According to the NHTSA, in 2007 a lane changing or merging accident occurs every 89 seconds and an injury or death occurs every 9 minutes. Signal® mirrors are designed to be seen from the sides and behind the vehicle and can be seen from several cars lengths back – helping to prevent an accident.

Signal Mirror® Retrofit kits

Only the glass portion of the mirror assembly is replaced for most kits. Several of the kits contain the entire mirror housing assembly. Check the application guide for specifics on each kit.

Heated kits are available for many applications. The vehicle must have heated mirrors from the factory for the heated portion of the Signal Mirror® retrofit kit to function – it does not upgrade non-heated mirrors to heated.

Each kit comes complete with left and right hand Signal Mirror® assembly, installation kit and instructions.

Professional installation is recommended.

Kits available for:

| Automobiles | Motorcycles |
| Trucks | Heavy-Duty trucks |
| SUV's | |

Wide Angle Signal® Mirror

Signal® Mirror Active

Wide Angle View

Designed to be installed on virtually any vehicle, this safety accessory is really two mirrors in one - a fully functional Signal® mirror and a convex mirror for expanded visibility.

Wide Angle Signal® Mirrors mount directly onto your vehicle's exterior rearview mirror. This allows a wider variety of vehicles to include this revolutionary safety accessory.

The view in a Wide Angle Signal® mirror reflects images usually hidden in the blind spot. Wide Angle Signal® mirrors are available with either red or amber chevrons.

Signal® Mirrors For Motorcycles

Signal Mirror® Upgrade Modules

Harley-Davidson Indian Chief Metric Cruiser

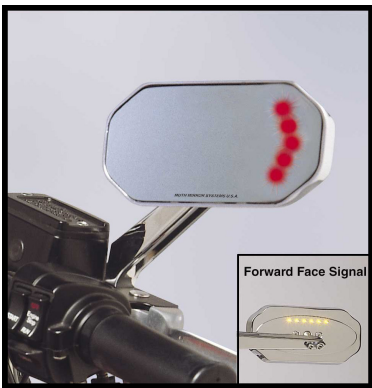

Chromed 6061-T6 Billet Aluminum. Full mirror housings with forward-facing amber signal and doubles as a running light. Signal® mirror flashes red chevron
